The second part of the ad contains pictures of the main features of the product and their functionality. The same image is seen at the bottom right corner of the page as well as in the footer. This image is used all over the site and even on the logo. Efficacy of Advertising According to George P. Sykes, a professor of marketing at Rutgers University, advertisers consider two factors when it comes to the efficacy of advertising: the effectiveness of advertising and its perception. The effectiveness of advertising is the rate of persuasion in which the advertisement affects an individual's behavior. If advertising is very effective, then it can persuade people to make a decision that they would not make otherwise. However, if advertising is not very effective, then it may be discarded as unimportant, thus affecting the perception. There are various factors that affect the perception of the advertisement: Type of information. Time of information. Place of information. The source of information. The format of information. Individual. Group. The context in which the information is conveyed. The frequency of information. The publicity or publicity-leisure time ratio. The cultural context. The social context. The relation of the message to the personality of the listener. For example, a magazine advertisement will be more effective if it is published in the Sunday edition of a newspaper. Types of Advertising There are four main types of advertising: 1. Advertisement: An advertisement is an advertisement that generates interest in a product or service, usually by showing or telling a story. There are two types of advertisements: Promotional advertisements are usually in the form of a commercial, print, broadcast, television, or radio ad. These ads usually have an eye-catching headline and a provocative message that captures attention. Advertisements that are completely unrelated to the product or service are also known as promotionals. For example, there are billboards with eye-catching ads, television commercials for soap operas and music videos, print ads for the grocery store, and radio ads for political parties. This is the type of advertisement that most people usually see. 2. Publicity: Publicity ads are aimed to communicate information about the company, its employees, or its services. These advertisements can be in the form of a newspaper ad, radio ad, or
