Q: How to read the same file in two different threads I am making an application where each thread needs to read a file and save its content to a database table. I found a number of examples that solved the issue of reading one file at a time. I am looking for information on how to make the threads work in parallel. Here are some examples from the web: //Source: public void FetchContent() { StreamReader sr = new StreamReader("1.txt"); int i = 1; string readText; while ((readText = sr.ReadLine())!= null) { //execute the background thread ThreadStart t = new ThreadStart(() => FetchText(readText, i)); Thread th = new Thread(t); th.Start(); //execute the UI thread Thread.Sleep(500); i++; } f30f4ceada
